Bitcoin Mining Meets the AI Infrastructure Boom: How SHRMiner Brings Cloud Computing Power to Crypto Users

Our Friends · Monday, August 31st, 2026

Bitcoin mining companies are rapidly becoming major players in the global AI infrastructure market.

IREN, a company originally known for large-scale Bitcoin mining, reported that its AI Cloud Services revenue increased nearly eightfold—from \$16.4 million in fiscal 2025 to \$128.8 million in fiscal 2026. The company said its latest results reflected an ongoing transition from Bitcoin mining toward AI cloud services as demand for data centers, energy capacity, and high-performance computing continues to grow. [Review IREN's fiscal 2026 results.](#)

The shift highlights a broader trend. Cryptocurrency mining and AI computing both depend on large data centers, reliable energy supplies, cooling systems, and intelligent allocation of computing resources. As these industries move closer together, access to computing power is becoming one of the digital economy's most valuable resources.

SHRMiner Makes Cloud Computing Power More Accessible

Against this backdrop, the [SHRMiner cloud mining platform](#) is giving crypto users a simpler way to access mining infrastructure without purchasing or maintaining physical equipment.

SHRMiner operates through a cloud computing-power rental model. Users select contracts with different prices, operating periods, and computing-power allocations, while the platform's remote data centers handle equipment deployment, electricity, cooling, and daily maintenance.

The model allows users to participate through BTC, ETH, DOGE, LTC, USDT, and USDC without building a mining facility or learning how to configure ASIC hardware.

Key SHRMiner features include:

- No physical mining equipment to purchase
- No separate electricity or maintenance costs
- Multiple contract prices and operating periods
- Automated computing-power allocation
- Daily settlement under the applicable contract terms
- Real-time contract and account monitoring
- No specialized mining experience required

Selected SHRMiner Cloud Mining Contracts

The following are examples of products previously displayed by the platform. Users should confirm current availability and projected rewards through the [latest SHRMiner cloud mining contract listings](#).

Cloud Mining Contract	Contract Price	Duration	Estimated Daily Reward	Estimated Contract Reward
Bitcoin Miner S21 XP Imm	\$5,000	25 days	\$70.50	\$1,762.50
MICROBT WhatsMiner M73	\$8,000	30 days	\$116.80	\$3,504
Bitcoin Miner S21e XP Hyd	\$10,000	35 days	\$151	\$5,285
ANTSPACE HK3	\$30,000	40 days	\$513	\$20,520

Each product listing displays the contract price, operating period, estimated daily reward, and estimated total contract reward, allowing users to compare options based on budget and duration.

Why Nora Decided to Try Cloud Mining

Nora had held Bitcoin since 2022 and had considered mining it herself more than once. Each time, the cost of ASIC equipment, rising electricity bills, and the noise and heat involved convinced her to put the idea aside.

After reading about mining companies turning their power and data-center expertise toward AI computing, she became interested in the infrastructure behind both industries. Instead of buying hardware, Nora opened a SHRMiner account, claimed the \$15 new-user credit, and used the trial contract to learn how the dashboard worked.

She later selected a smaller, short-term contract and checked its progress from her phone each morning. For Nora, the appeal was straightforward: she could explore cloud-based mining without turning part of her home into a server room. She completed the first contract before deciding whether to continue.

How to Use SHRMiner in Three Steps

Step 1: Register and Receive a \$15 Bonus

Users can [open a free SHRMiner account and claim the introductory credit](#). Registration generally takes less than two minutes and does not require a technical background.

Eligible new users may receive a \$15 credit and a complimentary trial contract, providing an opportunity to explore the dashboard and daily settlement process. Current eligibility requirements and promotional terms are available on the registration page.

Step 2: Review and Select a Cloud Mining Product

After signing in, users can compare cloud mining products with different prices and operating periods.

Each product listing includes:

- Contract name

- Contract price
- Operating period
- Estimated daily reward
- Estimated total contract reward

Users can select a computing-power contract based on their budget, preferred duration, and risk tolerance.

Step 3: Monitor the Contract Through the Real-Time Dashboard

Once a contract is activated, the SHRMiner dashboard allows users to review:

- Active cloud mining contracts
- Computing-power status
- Daily settlement records
- Available account balance
- Remaining contract duration
- Withdrawal and transaction history

Rewards are credited according to the applicable contract terms. Available balances may be withdrawn to a supported digital wallet or used to select another computing-power contract, subject to the platform's current rules.

Computing Power Is Becoming Core Digital Infrastructure

IREN's expansion from Bitcoin mining into AI cloud services shows how energy, data centers, and computing capacity are becoming increasingly important across both the cryptocurrency and artificial intelligence industries.

For crypto holders who do not want to purchase hardware or manage a mining operation, SHRMiner offers a more accessible way to explore cloud-based computing power.

Visit the [official SHRMiner website to explore available cloud mining contracts](#) and review current products, introductory offers, and contract terms.
