## How AviClear Laser Targets Acne Without Harsh Side Effects

Our Friends · Monday, June 30th, 2025

Acne can be frustrating and difficult to manage. When you use traditional treatment, you will undergo strong medications or topical creams that cause dryness, irritation, and long-term side effects.

AviClear is a new laser-based solution that targets the source of acne safely and effectively, without the use of common harsh chemicals or discomfort. Read on and explore how this treatment works and why it's changing the way acne is treated.

### Understanding the Cause of Acne

Acne is more than just a skin problem. It shows up when the oil glands on your skin make too much sebum. Putting this oil on top of dead skin cells plugs your pores, which causes redness and acne.

AviClear stops future breakouts by going after the sebaceous glands, where the oil comes from. You can get long-lasting benefits with this method without the irritation that usually comes with acid or retinol treatments.

### Modern Solution in Acne Treatment

AviClear uses a laser to send controlled energy into the skin, a safer way to reduce oil gland activity. The treatment is non-invasive, and it doesn't hurt or damage your skin.

More so, AviClear laser treatment is gentle and works well, making it a better choice for long-term acne care. The laser targets oil glands, not the surrounding skin. You don't have to use chemical-based creams. Plus, the treatment is suitable for all skin types and shades.

AviClear uniquely hits the oil glands and also keeps your skin from getting dry, flaky, or sensitive, which can happen with other acne products.

During an **aviclear laser** session, you may feel a light snapping or warming feeling. But a built-in machine cooling system keeps your skin comfy during the treatment.

### What to Expect During and After Your Treatment

An AviClear treatment plan usually includes three sessions, each about a month apart. Every session lasts around 30 minutes. The procedure has no downtime, so you can return to work,

school, or daily activities right away.

After each of your sessions, you will feel mild redness or warmth, which fades in a few hours. Visible results will start to show within weeks and will continue to improve with each session. You can expect these benefits after treatment:

- Fewer breakouts and reduced oiliness
- Smaller pores and smoother skin texture
- Gradual, long-lasting improvement

Using antibiotics, hormone pills, or prescription creams for acne treatment can lead to serious side effects. AviClear doesn't have any of these risks because this treatment doesn't use any drugs or chemicals.

## Is AviClear Right for You?

AviClear laser treatment can help people of all ages who have acne, even teenagers with hormonal breakouts or adults who have had long-term skin problems. The treatment is also effective if you want to avoid strong drugs or have no luck with OTC meds.

Your skin professional will help you decide if AviClear is a good option for your current acne condition. You will know your skin type, the seriousness of your acne, and your past treatments, and the skin specialist will make a plan just for you for better and clearer skin.

## AviClear Laser Treating Your Acne from Root to Surface

AviClear is a new way for you to get rid of acne without having to deal with bad side effects. With precise technology and a focus on oil production, the laser treatment targets the root cause of acne more safely and comfortably. If you want better skin, this procedure is a good choice with little downtime and long-lasting effects.
