## Mastering the Art of Buhurt Swords: A Comprehensive Guide

Our Friends · Friday, March 7th, 2025

All things considered, the history of **buhurt swords** is extensive and stretches back to the Middle Ages. Popular among knights and warriors, these swords were made especially for fighting. They are distinguished by their capacity to deliver strong and accurate blows and by having a curved blade.

These warriors compete in thrilling conflicts, each vying to be the last person standing, while brandishing dull steel weapons and wearing the recognizable armor of the Middle Ages. This exciting sport, which has enthralled spectators for centuries, brings together fighters from all over the world.

### Characteristics of an Effective Buhurt Sword

Buhurt swords are different from other kinds of swords because of a number of unique characteristics. First of all, their curved blade improves slashing and cutting actions. The sword's cutting power is increased by its curved design, which also increases its effectiveness in fighting.

One-handed guards, which shield the hand wielding the blade, can be added to similar swords. In order to prevent injuries to the wielder's hand and deflect hits, the guards are positioned strategically. In buhurt or medieval tournaments, when fighters fight fiercely and dynamically, this trait is very crucial.

### One-handed Swords

Designed for armored combat, this sword's 87 cm total length guarantees a strong hit. The blade's 71 cm width increases the potential for injury in intense fighting when compared to traditional dueling swords.

The 18 cm crossguard length of this sword offers excellent hand protection, ensuring that you can battle with ease. Quick and accurate strokes are made possible by the well-balanced design, which has a balancing point 11 cm from the crossguard and offers the best control and agility.

### Two-handed Swords

The Zweihander, a two-handed sword designed to survive the rigors of armored warfare duels, will help you get ready for battle. This sword is a masterwork created to meet the technical requirements of modern dueling battles, fusing historical charm with the utility you need to

perform at your best.

This isn't just another big blade. For added stability, the Zweihander 2.0's blade is 5 mm (0.2 in) thicker. It prevents that irritating "whirly" blade sensation while maintaining a steady weight for a balanced feel.

## Selecting the Right Buhurt Sword for You

Careful thought must go into selecting the best one-hand guards curved training buhurt sword. Here are some things to consider:

- **The Blade Material:** Choose strong, long-lasting materials like stainless steel or carbon steel. These components guarantee that the sword will survive demanding practice and fighting.
- **Length:** Take your preferences and intended use into account while choosing the sword's length. While shorter swords are more maneuverable, longer swords have a greater reach.
- **Weight:** Choose a sword that is balanced and comfortable in your hand. The weight ought to facilitate easy mobility and precise control.

You need look no farther than the disc-pelled arming sword. This blade is made to endure even the most difficult battles and was created especially for use in armored combat disciplines. With its rounded and blunt blade, this sword satisfies all major league safety regulations. Using this weapon at your next armored combat event will give you a sense of security and confidence.

With a blade length of 73 cm and a crossguard length of 13 cm, this sword's overall length of 90 cm achieves the ideal ratio of power to maneuverability. The guard can maneuver quickly and nimbly in the midst of battle because the balancing point is only 5 cm away.

At only 1305 g, this sword is manageably light to hold while still having a strong punch that can inflict devastating blows. For any professional armored combat fighter, the disc pommel is the ideal choice since it gives the sword an additional degree of stability and balance.

The best option for refining your abilities and learning strategies for fierce conflicts is the armored combat training longsword. We created this longsword to endure the demands of spell work and training conflicts thanks to its remarkable 123 cm length and strong 90 cm blade.

With its center of gravity 5 cm from the cross-guard, the training longsword, which weighs 2100 g and has a cross-guard length of 16 cm and a handle length of 32 cm, provides outstanding balance. It is the perfect instrument for learning complex techniques because of its precision and maneuverability-optimized design.

## Maintenance and Care for Buhurt Swords

Numerous swords are still manufactured in the same manner as they were hundreds of years ago, and they are susceptible to the same issues, primarily rust. Swords should not be kept in leather scabbards for extended periods of time. They will rust quickly due to the leather's moisture content. As long as the blade is oiled prior to extended storage, a wood core scabbard is adequate for storing a sword.

Steer clear of holding the blade too much because skin oils can harm the metal. Make cautious to remove any fingerprints if they do come into contact with hands. Use WD40 to clean a rusted

blade. Try using a synthetic sanding pad, like those made by 3M, for deeper rust. To avoid scratching the blade, use the best quality. The rust eraser is effective at removing extremely resistant rust.
